

Street repairs and improvements are ongoing and usually occur annually, but the effort was deferred in 2016 due to other significant public projects underway, most notably the purple pipes infrastructure project. As a result, crews will be working on catching up a year, performing maintenance on more than 4.5 million sq. ft. of pavement throughout the City, including several residential streets.

An entire grading and inspection system for streets is used to prioritize road improvements in Pleasanton. Created by the Army Corps of Engineers and adopted by the Bay Area Metropolitan Transportation Commission, the Pavement Condition Index (PCI), is the system the City uses to inspect all of the City's 1,311 roadways every two years. Roadways are assigned a numerical rating up to 100, and Pleasanton's inspection data rates have been consistently high, with an overall PCI rating of 80, the third highest ranking in Alameda County.

To learn more about the condition of City streets overall, and to find out which streets will be receiving which treatment, visit the City's [Roadwork and Infrastructure Maintenance](#) page on the City's website at [www.cityofpleasantonca.gov](http://www.cityofpleasantonca.gov)
